MARKETING MANAGEMENT IN INDIA

Dr. Janak Singh Kushwah
Govt. Degree College Joura Dist. Morena (M.P.)

ABSTRACT

Marketing Management is the Organizational discipline which focuses on the practical application of marketing orientation, techniques and methods inside enterprises and organizations and on the management of a firm's marketing resources and activities. Marketing management employs tools from economics and competitive strategy to analyze the industry context in which the firm operates. These include Porter's five forces, analysis of strategic groups of competitors, value chain analysis, and others. In competitor analysis, marketers build detailed profiles of each competitor in the after the firm's strategic objectives have been identified, the target market selected, and the desired positioning for the company, product or brand has been determined, marketing managers focus on how to best implement the chosen strategy. Traditionally, this has involved implementation planning across the 4 Ps: product management, pricing (at what price slot does a producer position a product, e.g. low, medium or high price).

Introduction:

Marketing: it is a place where buyers and sellers sell and buy from producers. Marketing: it is a process or system of business activity designed to plan, promote, and distribute the want satisfying goods and services to target market. Marketing management: if can be defined as an art and science of choosing target volume and getting keeping and growing customer to create delivering and communicating superior customer value.
Definitions according to American Marketing Association, marketing is the activity, set of institutions and processes for creating, communicating, delivering, and exchanging offerings that have value for customers, clients, partners, and society at large. According to Dr. Philip Kotler, marketing is the science and art of exploring, creating, and delivering value of satisfying the needs of target markets at a profit. Marketing identifies unfulfilled needs and desires. If definitions measure and quantifies market and profit potential.

A brand audit usually focuses on a business’s strengths and resource capabilities because these are the elements that enhance its competitiveness. A business competitive strengths can exist in several forms. Some of these forms include skilled or pertinent expertise, valuable physical assets, valuable human assets, valuable organizational assets, valuable intangible assets, competitive capabilities, achievements, and attributes that position the business into a competitive advantage, and alliances or cooperative ventures.

**Algorithm:**

Conceptually, a merge sort works as follows:

1. Divide the unsorted list into n sublists each containing one element (a list of one element is considered sorted)
2. Repeatedly merge sublists to product new sorted sublists until there is only sublist remaining. This will be the same list.

**Top-down implementation:**

Example C-like code using indices for top-down merge sort algorithm that initially splits the list (called runs in the example) sublists until sublist size is 1, then merges those sublists to produce a sorted list. The copy back step is avoided with alternating direction of the merge with each level of recursion (except for an initial one-time cost that can be avoided too). To help understand this, consider an array with two elements.

**Marketing strategy:**

Two customer segments are often selected as targets because they score highly on two dimensions:

1. The segment is attractive to serve because it is large, growing, makes frequent purchases, is not price sensitive (i.e., is willing to pay high prices), or other factors; and
2. The company has the resources and capabilities to compete for the segments business can meet their needs better than the competition, and can do so profitably.
Brand audit :-

A Branch audit is a thorough examination of a brand's current position in an industry compared to its competitors and the examination of its effectiveness. When it comes to brand auditing, six questions should be carefully examined and assessed.

Implementation Planning :-

If the company has obtained an adequate understanding of the customer base and its own competitive position in the industry, marketing managers are able to make their own key strategic decisions and develop a marketing strategy designed to maximize the revenues and profits of the firm. The selected strategy may aim for any of a variety of specific objectives, including optimizing short-term unit margins, revenue growth, market share, long-term profitability, or other goals.

Project, Process and vendor Management :-

More broadly, Marketing managers work to design and improve the effectiveness of core marketing processes, such as new product development, brand management, marketing communication and Pricing. Marketers may employ the tools of business process re-engineering to ensure these processes are properly designed, and uses a variety of process management techniques to keep them operating smoothly.

Effective execution may require management of both internal resources and a variety of external vendors and service providers, such as the firm’s advertising agency. Marketers may therefore coordinate with the company’s purchasing department on the procurement of these services. Under the area of marketing agency management, (i.e., working with external marketing agencies and suppliers) are techniques such as agency performance evaluation, scope of work, incentive compensation: ERFXs and storage of agency information in a supplier database.

1. Financial institutions provide long term finance which are not provided by commercial banks.
2. The funds are made available even during periods of depression when other sources of finance are not available.
3. Obtaining loan from financial institutions increases the goodwill of the borrowing in the capital market. Consequently

Regulation :-

Financial Institutions in most countries operate in a heavily regulated environment because they are critical parts of countries economies, due to economies dependence on them to grow the money supply via fractional reserve banking. Regulatory structures differ in each country, but typically involve prudential regulation as well as consumer protection.
and market stability. Some countries have one consolidated agency that regulates all financial institutions while others have separate agencies for different types of institutions such as banks, insurance companies and brokers.

Countries that have separate agencies include the United States, where the key governing bodies are the Federal Financial Institutions Examination Council (FFIEC) Office of the Comptroller of the Currency – National Banks, Federal Deposit Insurance Corporation (FDIC) State Non-Member Banks, National Credit Union Administration (NCUA) Credit Union, and Federal Reserve (Fed) – Member Banks.

Conclusion :-
Financial Institution is very essential part of financial system. Financial Institution play a vital role in economic development. Indian financial institutions are very strong but its operation is very poor quality. We Indian make very good plans but in implication we are lacking somewhere.
